

## Erasmus+ strategic partnership for Higher Education Project 2019-1-R001-KA203-063153

## Development of mechatronics skills and innovative learning methods for Industry 4.0

## **PRESS RELEASE**

EU research project MIND presents results through transnational meeting in Serbia

EU founded Erasmus+ project MIND (Development of mechatronics skills and innovative learning methods for Industry 4.0, Project Reference: 2019-1-RO01-KA203-063153) is getting closer to it's end after close to three years and after facing the current pandemic times.

MIND project has following main objectives:

- 1. Determine the most common mechatronics skills that are required for Industry 4.0 within the region of the partner countries.
- 2. Raise the employability of students, the relevant knowledge, and competences, considering the needs of companies that implement Industry 4.0 concepts.
- 3. Enhance the learning experience of teaching staff and students by the construction of an online e-learning platform that will support courses and learning materials regarding state-of-the-art industrial topics.
- 4. Enhance and construct cross-sector synergies through the cooperation of higher education institutions and the representatives of private sector with the scope of narrowing the gap between the requirements of companies and actual skills developed through actual higher education curricula.

The transnational meeting in Serbia was held at the University of Nis. The laboratories were presented to the Romanian partners and the evolution of the projects were discussed. New project ideal have been put on the table and many future collaborations were established.
